

MicroStation VBA Macro: View Rotation

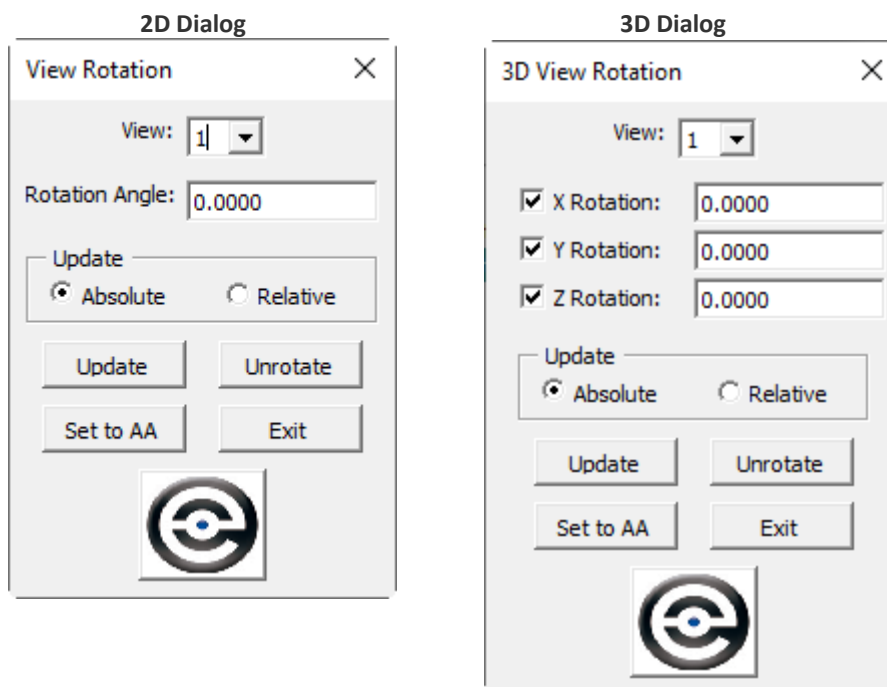

Note: menu options may appear different as more freeware tools are added

Key-in Command: VBA RUN [ViewRotation]ViewRotation

This macro provides expanded functionality for rotating views.

There are two modes for the macro, 2D and 3D. The macro will display the appropriate dialog for the dimension of the active model.

For both modes select the view number on which to operate and the rotation angle(s). In 3D mode you may modify the X, Y, and Z rotation values independently.

Update options

- **Absolute** – Rotate the selected view to the rotation angle(s) specified
- **Relative** – Rotate the selected view by adding the rotation angle(s) specified to the view's current rotation angle.

Command Buttons

- **Update** – Apply the rotation values to the selected view
- **Unrotate** – Restores selected view to a rotation of 0 degrees
- **Set to AA** – Rotates the selected view by the current Active Angle setting
- **Exit** – Exit the macro
