

MicroStation VBA Macro: View Level

Note: menu options may appear different as more freeware tools are added

Key-in Command: VBA RUN [ViewLevel]ViewLevel

This macro allows the user to display all levels containing displayable objects individually in a slide-show type manner.

Tool Options:

- **Level** drop-down – Lists the levels that are being used in the design file. Selecting a level from the list will make that level active and turn off the display of all other levels.
- **Previous** – Sets the *previous* level in the drop-down list as the active level. The display of all other levels is turned off.
- **Next** – Sets the *next* level in the drop-down list as the active level. The display of all other levels is turned off.
- **Restore view on exit** – The level display is restored to its original state when the macro is exited.
- **Exit** – Exits the macro. The original level state is restored if the check box is toggled on.
